

IMPORTANT INFORMATION ABOUT YOUR DRINKING WATER

Monitoring Requirements Not Met for Huron Regional Water Authority

Huron Regional Water Authority is required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did not complete monitoring for per- and polyfluoroalkyl substances¹ (PFAS) and therefore, cannot be sure of the quality of your drinking water during that time. The violation **does not** pose a threat to the quality of the supply's water.

What should I do? There is nothing you need to do at this time. This is not an emergency. You do not need to boil water or use an alternative source of water at this time. Even though this is not an emergency, as our customers, you have a right to know what happened and what we are doing to correct the situation.

The table below lists the contaminants we did not properly test for, how often we are supposed to sample for these contaminants, how many samples we are supposed to take, how many samples we took, when samples should have been taken, and the date follow-up samples will be collected.

Contaminants	Required sampling frequency	Number of samples taken	Date samples should have been collected	Date samples will be collected by
PFAS	1 sample	0	02/04/2021 – 09/30/2021	12/31/2021

What happened? What is being done? We inadvertently missed collecting a PFAS within the required monitoring period. We collected the required follow-up sample on December 14, 2021. All Per-And Polyfluorinated Alkyl Substances were at levels of Not Detected. Our staff is making every effort to assure this does not happen again.

For more information, please contact Huron Regional Water Authority (989) 738-4180.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

More information about your drinking water is available from the U.S. Environmental Protection Agency Office of Water home page at: <http://www.epa.gov/safewater/dwinfo.html>. This notice is being sent to you by Huron Regional Water Authority.

¹ PFASs are tested by collecting one sample and testing that sample for all the regulated PFAS compounds. PFAS include hexafluoropropylene oxide dimmer acid (HFPO-DA), perfluorobutane sulfonic acid (PFBS), perfluorohexane sulfonic acid (PFHxS), perfluorohexanoic acid (PFHxA), perfluorononanoic acid (PFNA), perfluorooctane sulfonic acid (PFOS), and perfluorooctanoic acid (PFOA).
